       Title
OKUBAN TARGET SUM
         Description
           You are given a list of integers, and your task is to write a function that finds the two numbers in the list that add up to a specific
           target sum. You need to return the indices of these two numbers.
                                                                                                                             ,23CSE09
           Write a function that takes a list of Integers and a target sum as input and returns a list of two indices (0-based) of the numbers
           that add up to the target sum. Assume that there is exactly one solution, and you cannot use the same element twice
1090 KUR
           Sample Input:
                                                                                                                             OOKUR
           271115
           9
           Sample Output:
           [0, 1]
